CORRESPONDING BASES

MODULAR DIVIDERS WITH A CYLINDER BLOCK BASE FOR DUAL-LINE SYSTEMS

The modular dividers for the dual-line system consist of: **Cylinder block base and metering valve.**

The base and the valves are available with anti-corrosion treatment, with inbound and outbound threads, BSP or NPTF.

The valves can be supplied with an adjustable or fixed flow rate; the ones with an adjustable flow rate feature adjustment turrets with a methacrylate ring cover and O-ring (standard version).

The "locking plate" must be ordered separately and it can be positioned on the base for adding additional valves.

The modular dividers are marked with a laser marking system directly on the nickel-plated element and indicate the following information:

The marking, **ATEX CE Ex II 2 GD** - Configuration information for the single and double outlet and outlet measurements in cm³ and cu. inch - part number and production order identification (batch).

TECHNICAL INFORMATION

TECHNICAL CHARACTERISTICS

Temperature	-30°C ÷ +80°C
Frequency	100 cycles/minute.
Maximum pressure (input)	400 bar
Lubricant	Min. viscosity: 100 cSt Grease, max.: 265 ASTM (NLGI 2) - For different types of grease, contact your supplier.
Thread of the base	Input: 3/8" BSP or 3/8" NPTF. Output: 1/4" BSP or 1/4" NPTF.
Flow rate	Fixed Adjustable DMMF - DMF DMM - DM

APPLICATIONS

- **PAPER MILLS**
- **STEEL PLANTS**
- **CEMENT PLANTS**
- **LARGE-SCALE LOADING AND LIFTING EQUIPMENT**

HOW TO CONVERT FROM TWO OUTLETS TO ONE

2 OUTLETS

The valves are fitted as standard with two free outlets.

For use with only one outlet, it is necessary to:

- unscrew the two fastening screws that secure the divider to the base and turn it over
- remove the two O-rings (part number 18889) located inside.
- Lastly, re-mount the divider onto the base.

1 OUTLET

IMPORTANT Separately order the plug with part no. 0926001 (UNI-ISO) or part no. 0850304 (NPTF) to close the outlet not used.
